## Learning outcomes

By creating this website, I was able to get good knowledge about html and css. In the beginning I didn't have any knowledge about html and css but after creating this I got love for web development. When I started creating the web page, I had problems with creating the web page with html and decorating the web page with css.

Then I got the basic knowledge about html and css by using YouTube videos. Through the lessons taught by the class teacher, I learned about inserting them into the web page. At first I had trouble resizing the images used on the web page using css, but after repeated practice I solved the problem. In addition, it was difficult for me to place the titles on the web page correctly at the beginning.

However, eventually I learned how to create a web page using html and css and how to handle html and css properly. And this website builder has given me the ability to create a website in a more interesting way than before
